Appendices

- A Full list of publicly accessible green spaces and designated local green spaces
- B Qualitative analysis of publicly accessible green spaces
- C Green infrastructure network

EXECUTIVE SUMMARY

Scope

This study has been undertaken to inform the developing Neighbourhood Plan on policy relating to:

- **Publicly accessible local green spaces** including ancient woodland, water bodies, assets of biodiversity value, recreational playing fields, children’s play areas, and allotments as identified from public records.
- **Green infrastructure** including corridors of trees, hedgerows, and woodland areas which line roads around the town as identified through published DEFRA records and documented by the Town Council’s planning adviser.

Key Issues

Beaconsfield is an attractive, historic market town which has grown over the years as an important destination for families and businesses. It is surrounded by exceptional countryside in the Chilterns Area of Outstanding Natural Beauty (AONB) and strategically important Green Belt land. Local residential agents consistently state that the greenness of the town is one of the top 3 reasons people want to live in Beaconsfield.

Public parks and garden green spaces occupy 0.37% of the area of Beaconsfield, considerably below the national average of 0.79%. Despite the town’s relative affluence there are pockets of deprivation, a relatively high proportion of people living in flats, and a high proportion of working families and individuals with children.

With increasing pressures on land for development and infill developments within the town it is increasingly important that these spaces, and the green boundaries around the town are protected, maintained, and enhanced through effective use and management.

Public feedback from the Vision4Beaconsfield, Public Consultations and visits to the green spaces supported a number of guiding policy principles and objectives:

Policy principles

1. To designate high community value Local Green Spaces to protect them for generations to come.
2. To create, enhance, and maintain a green infrastructure network of local open green spaces, green corridors and other assets in and around the town.

3. To ensure that development proposals that are within or adjoining the green infrastructure network are required to have full regard to creating, maintaining, and improving the network including delivering a net gain in biodiversity value.

Objectives

1. **Designating candidate Local Green Spaces** with the highest level of protection that have no current protection:
 - St Michael’s Green – green space
 - The Oval – green space, sports (tennis)
 - Walk Wood – ancient woodland, meadow, green space
 - Market Square Garden – green space
 - Malthouse Recreation Ground – green space, playground, fitness zone, football nets
 - Holtspur Recreation Ground – green space, playground, fitness zone.
2. **Balancing people and nature** and ensure that the town continues to be attractive as a place to live, work and play for everyone –improving their use, accessibility, and connectivity.
3. **Creating effective spaces** which are well designed and of high quality to maintain vibrancy and social cohesion – improving their design, care and maintenance.
4. **Improving health and being** by promoting healthy lifestyles and safe communities in the town through better access to all publicly accessible green spaces, and a network of safe and effective footpaths and cycle routes – protecting and enhancing sports/playing fields, woodlands and allotments; and improving information boards and way marking.
5. **Improving biodiversity** by mitigating climate change and enhancing the natural environment in the town for the benefit of people and nature – maintaining and planting new street trees; maintaining and improving existing hedgerows and habitats; planting bulbs and wild flowers; rewilding; protecting bat and hedgehog populations; and planting green roofs and green walls.

N.B. This study does not cover private green spaces (except some sites raised at Reg14). We are advised that Local Green Space designations for green spaces already within the Green Belt do not require additional protections.

1. BACKGROUND

This study has been prepared by a volunteer group of residents, as part of the Beaconsfield Neighbourhood Plan, tasked by Beaconsfield Town Council to bring together recommendations relating to a green infrastructure network of local green spaces and green corridors and other assets in and around the town based on robust evidence.

As part of this exercise, it also identifies land that is special to the community and should be given the highest level of protection through a Local Green Space designation.

This has all been translated into a number of key policies for the Neighbourhood Plan.

2. SCOPE

The scope includes all identified publicly accessible open spaces i.e. those owned by the Buckinghamshire Unitary Council, Beaconsfield Town Council and Housing Associations including privately owned Common Land green areas. Information relating to ownership of candidate Local Green Spaces, existing site designation and size, have been provided by Beaconsfield Town Council from local registers and records.

Land owned by churches, private land, and community owned sports open spaces, and other spaces such as cemeteries, car parks, and schools are excluded.

The study includes open green areas, woodlands, meadows, ponds, nature reserves, allotments, playgrounds, sports fields, and street trees and hedgerows the 'green corridors' around the town.

The Local Green Space designation element of the study excludes land in the Green Belt, and those with other protected designations as we are advised that this land is considered to have sufficient protection from harmful development through existing national planning policy or through the nature of its ownership and use.

The study:

- Identifies and describes current publicly accessible local green spaces and green corridors.

- Reinforces why local green spaces and green corridors are important to the town and how planning can help with their maintenance and enhancement.
- Highlights feedback from public consultations including the Vision4Beaconsfield work and this Neighbourhood Plan.
- Assesses each of the local green spaces against a qualitative set of criteria to allow consistent comparison between the spaces.
- Applies the guidelines and criteria as set out in the National Planning Policy Framework (NPPF) (Paragraphs 101 and 102) for designating a Local Green Space.
- Lists 'Local Green Spaces' (to protect from inappropriate development) and those 'Valued Green Spaces with Existing Protection'
- Sets out a number of key objectives and recommendations relating to the future protection and enhancement of green spaces and green corridors in the town.

Beaconsfield Neighbourhood Plan – Local Green Spaces and Green Corridors

Green transport networks such as footpaths, cycle paths, and bus services in and around Beaconsfield and into adjoining areas of Green Belt and AONB are addressed as separate policy areas in the Neighbourhood Plan. These are crucial in supporting accessibility to local green spaces and enabling the town to work towards net zero, thereby addressing ongoing traffic congestion and air quality challenges.

3. OUR APPROACH

Set out below is our approach to the study and the steps taken to reach our recommendations:

a. **Set up**

We agreed Terms of Reference, the scope, roles and responsibilities, and a timetable. We developed templates for data gathering. We identified a number of key issues and criteria to assess the sites so that a robust comparison could be made between them.

b. **Review of publicly available policies and plans**

We reviewed publicly available policies and plans relevant to open spaces, green infrastructure, and habitats at a National and Local Government level.

c. **Site Visits and Asset Register**

Each green space was visited in mid 2022, and notes prepared on their walkability and access, use, key challenges, and areas for improvement. Photographs were taken of each of the sites.

d. **Qualitative Assessment of Sites**

Each site was measured against six key criteria with reference to the guidelines set out in the National Planning Policy Framework (NPPF) 2019, and also having regard to the feedback from the public consultations from Vision4Beaconsfield (V4B) study and for this Neighbourhood Plan. This was represented in a tabular and graphical format. The six criteria were:

- Accessibility
- Historical significance
- Recreational value (including as a playing field)
- Tranquillity
- Bio-diversity/wildlife.
- Air quality

e. **Local Green Space Assessment**

In reviewing the qualitative assessment and overall analysis, a number of the spaces have been listed as candidates for designation as a Local Green Space which affords the highest level of protection. A number of spaces, although not listed as Local Green Spaces, already afford a high level of existing protection e.g. they are in Green Belt, are Common land, are a registered Local Nature Reserve, or lie in a Conservation Area. These have been listed separately for completeness as ‘Valued Green Spaces with Existing Protection’.

f. **Mapping Green Infrastructure Corridors**

These areas of woodland, trees and hedgerows are important for wildlife and offer a rich biodiversity enhancing the overall visual attractiveness and ‘look and feel’ of the town. A network of green infrastructure has been mapped across the town for continued maintenance and enhancement. We also reviewed the online Green Infrastructure mapping resources of Natural England, Bucks Council and the BBO Wildlife Trust, including its initial work on identifying local nature recovery land.

g. **Recommendations**

Based on the evidence gathered, and feedback following the Regulation 14 phase of the consultation process, we have developed a number of guiding principles, and key objectives in relation to the open spaces and green infrastructure which we consider best meets the needs of the town going forwards.

4. WHY LOCAL GREEN SPACES AND GREEN INFRASTRUCTURE ARE IMPORTANT

Thriving **green open spaces** and **green corridors** are attractive and good for the health of people and the places where they live, work and play, and for nature:

- Access to a network of high quality, accessible, and safe **green open spaces** and opportunities for outdoor sport, physical activity and just being amongst nature enhances general wellbeing, promotes social interaction, and supports healthy life styles; and,
- **Green corridors** including trees, hedgerows, meadows, ponds, and woodland areas support biodiversity and wildlife, better landscapes, and general attractiveness, contributes to urban cooling, helps to manage localised flooding, and helps to mitigate air pollution.

Beaconsfield is an attractive historic market town surrounded by the strategically important Green Belt and the Chiltern Area of Outstanding Natural Beauty (AONB) including green fields, ancient woodlands, and a nature reserve. These green boundaries are critical in mitigating ongoing environmental and climate challenges and help to protect the character, identity and setting of the town and to prevent urban sprawl.

Within the town, there are a number of green spaces of varying size and use and established green corridors with many residential roads lined with trees and hedgerows particularly around Gregories Road, Burkes Road, west towards Holtspur and around Ledborough Lane/ Sandelswood End/Penn Road.

The town benefits from accessibility to central London, Heathrow Airport, the M40/M25 motorway networks, and employment opportunities along the A4/M4 business corridor. However, this comes with increasing challenges relating to air pollution and traffic congestion. There is also the need to balance the needs of local people who live in the town and those who visit for recreation and social purposes.

Research for the Vision4Beaconsfield (2015), and this Neighbourhood Plan, including interviews with a number of residential agents, highlighted access to green open spaces as one of the top considerations in the overall attractiveness of the town as a destination.

0.37% of the area of Beaconsfield is public park and garden green spaces. Significantly lower than the national average of 0.79% (as published in the Local Insight Report – August 2018 using Ordnance Survey data dated 2017). It is in this context that we have identified key local green spaces which need to be carefully protected, enhanced and managed along with green corridors which lie within the town. Also the green boundaries that surround the town are essential to redress this imbalance of a lack of public green open space within the settlement and should therefore be protected.

Ledborough Lane street scene

5. CURRENT PROVISION

There are 30 local green spaces and two green pathways which have been identified (see Appendix A). Set out is a qualitative assessment of each of the spaces (see Appendix B), and a map of the current green infrastructure network (see Appendix C):

There is a broad range of local green spaces of varying use and size in and around the town including open grassed areas, woodlands, meadows, ponds, an allotment, sports grounds, playgrounds, and a nature reserve/butterfly reserve. Each has a unique offering.

St Mary and All Saint Church with Waller's tomb

There are a number of highly significant historic areas of green space that require the highest level of protection, care, and maintenance:

- Market Square Garden
- War Memorial Gardens
- Town Hall Green
- Candlemas Pond
- Walkwood
- Hampden Hill

Set out below is a brief description of the key spaces by use:

- a. **Recreation Grounds/Playgrounds** – There are two important recreation grounds/playgrounds with larger green areas in the Old Town and in Holtspur which are well utilised. There is only a very small toddler playground in the New Town.
- Malthouse Square Recreation Ground (Old Town). The playground within this site has recently been refurbished.
 - Holtspur Recreation Ground (Holtspur).

- Garvin Avenue Toddler playground (New Town).
- b. **Sports Grounds** – There are five open green spaces across the town used for sports which are important community recreational assets:
- Wooburn Green Lane (football) in Holtspur.
 - Wilton Park pitches (football) in the Wilton Park development.
 - Oak Lodge Meadow (rugby) in the Old Town.
 - The Cricket Club in the Old Town.
 - The Oval (tennis) in the New Town.
- c. **Small Green Spaces** – There are two small gardens in the **Old Town** which are important as a place to relax and add to the visual attractiveness of the town:
- Market Square Garden. On the junction of Aylesbury End and Wycombe End.
 - War Memorial Gardens. On Windsor End adjacent to St Mary and All Saints Church.

There are two centrally located green spaces in the **New Town** which are places to meet, sit and relax:

- Town Hall Green. Adjacent to the Town Hall.
- St Michael's Green. A five minute walk from the New Town, Railway Station and Bekonscot.

There are four small local green spaces scattered **across the town** which break up the residential environment.

- Wheeler's Green. A cut through from Candlemas Mead to Candlemas Lane which is quietly positioned in a residential area and diagonally opposite Candlemas Pond.
- Candlemas Mead. A small circular piece of green space surrounded by residential in the New Town.
- Cherry Tree Road. A small triangular piece of green space lying opposite Holtspur Primary School and surrounded by residential.
- Malthouse Square. A square open piece of grassed area in the Old Town.

d. **Large Open Green Spaces** – There are two significantly large pieces of flat grassed areas close to the centre of the New Town surrounded by residential:

- Chesterton Green
- Hyde Green

There is a large parkland which forms part of the Wilton Park development area:

- Wilton Park Parkland

e. **Allotments** – There is one public allotment in the town at Holtspur:

- Ivins Road, Holtspur

f. **Nature Reserve** – There is an extensive sloping chalkland area of woodland and meadow rich in biodiversity within easy access of Holtspur. This is within Green Belt and is a registered Local Nature Reserve. It is managed by Friends of Holtspur Bank on behalf of the Town Council:

- Holtspur Bank Nature Reserve
- Butterfly Conservation Area (next to Holtspur Bank Nature Reserve)

g. **Woodlands** - There are a few wooded areas of varying size in the town:

- Walkwood. In close proximity to the centre of Beaconsfield between the Old Town and the New Town this is a significant ancient woodland bounded by a residential area and close to Butlers Court School and Beaconsfield High School.
- One Tree Meadow. On the eastern borders of the New Town (a 10 minute walk from the Town Hall), has a woodland area and scrub.
- Spinney/Wattleton Road. A small woodland area with established trees and scrub which separates the residential streetscape.
- Geary's Piece and Meadow. A long strip of deciduous woodland, scrub and meadow on the edge of the Old Town with limited access immediately off the north side of the A40.

- Important privately owned ancient woodlands and woodland habitats exist to the north east of Ledborough Lane including Browns Wood and Sandelswood; Hogback to the west, owned and managed in the main by the National Trust; and green space and woodland areas around Minerva Way, Wilton Park, and Bowl Barrow Way.

Walk Wood

h. **Ponds** – There is an important old established habitat located half way between the Old and New Town.

- Candlemas Pond

i. **Meadows** – there are two accessible open meadows supporting a rich and diverse biodiversity:

- Walkwood. A relatively flat area to the east of the wooded area.

- One Tree Meadow. An extensive, undulating open grassed area surrounded by woodland, residential and the railway line.
- j. **Trees and hedgerows ‘Green Corridors’** – there are significant areas of established trees and hedgerows on residential roads interspersed with woodland areas which are crucial to the visual attractiveness of the town and add to its rich biodiversity. These are particularly visible around:
 - Burkes Road/Gregories Road. Extensive corridors of street trees and hedgerows, and woodland areas.
 - Ledborough Lane/ Sandelswood End/ Penn Road. Extensive corridors of street trees and hedgerows.
 - Davenies Strip on Station Road. This is a valuable green corridor and pathway on the route from the New Town to the Old Town close to Davenies School.

Sandelswood End trees

- k. **Green Pathways** – there are two pathways which are important pedestrian routes in the town which have trees and hedgerows aligning their route:
 - Seeley’s Walk – linking Penn Road to Woodside Avenue alongside the Seeleys Estate, New Town
 - Gurney’s Piece – linking Gregories Road to Baring Road over the railway in the New Town
- l. **General Observations**
The following are observations following our site visits and group discussions:
 - No recreation/playground in the New Town Centre.
 - No recreational resources for children beyond the early years, particularly the teenage years.
 - Lack of a quality green amenity space ‘civic space’ which serves as a focus for the town.
 - Lack of street trees and habitat in many areas closer to the town centre which makes the street scene visually unattractive.
 - There are two significantly large pieces of green space close to the centre of the New Town - Chesterton Green and Hyde Green which are under-utilised and visually unattractive. These offer opportunities for further uses and enhancement.
 - Access to the existing football pitches at Holtspur, for both pedestrians and cars, could be improved being off a busy main road.
 - Wheeler’s Green, Candlemas Mead, Cherry Tree Road (a small triangular piece of green space lying opposite Holtspur Primary School) and Malthouse Square are relatively unattractive and would benefit from better landscaping.
 - There is one public allotment in Ivins Road, Holtspur which is well used by the community with variable levels of care and maintenance.
 - Walkwood (meadow) and One Tree Meadow have a rich biodiversity and are significant recreational resources which offer enormous potential.
 - Changes or enhancement to the design, quality of care and uses could help to improve our green spaces.
 - There is little information or waymarking of the significant local green spaces which lie within close proximity of the town centre.
 - There is a lack of signage and waymarking for the open spaces and their connectivity.

6. PUBLIC FEEDBACK ON LOCAL NEEDS

Recent public consultation events sought the views from the public on important issues relating to the local green spaces and green infrastructure around the town. This included the 'Vision4Beaconsfield' in 2015 which was undertaken to gather evidence for a new Town Plan, and the results of the recent public questionnaire and exhibition events for this Neighbourhood Plan in late 2021 to April 2022. The key feedback from these is as follows:

a. **Creating a Better Beaconsfield - Towards a Town Plan for Beaconsfield (2015-2020)**

This report was drawn together in 2015, known as 'Vision4Beaconsfield. Local residents volunteered to get involved and were tasked by Beaconsfield Town Council to look at the Town and prepare a report on findings and recommendations for improvement. This report in turn helped inform the following Town Plan. It set out a vision and a number of objectives. It is an important reference document as it was the outcome of considerable market research and public consultation, and many of the key themes are relevant today.

Creating a Better Beaconsfield - Towards a Town Plan for Beaconsfield Vision for Beaconsfield (2015-2020)	
Vision	'We want Beaconsfield to retain its character as an attractive and prosperous market town, enriched by well cared-for public and green spaces; proud of its history but open to innovation; a stronger and more inclusive community where civic pride is strong and where all residents feel connected and able to engage fully in decision-making processes that help shape the future'.
One of the top 5 reasons they most liked about Beaconsfield	'The greenness of the town and its surrounds'.
The public were asked. If you could bring about one positive change, what would it be?	'Greening the town' 'Improving access to sport and leisure'
The public were asked. What do our children want? The top of their wish lists included:	'Outdoor playgrounds' 'A bigger park/green spaces' 'Football pitches for everyone' 'Skatepark'
Key vision for the natural environment:	'Protecting and enhancing the natural and built character of the town' 'We want to see Beaconsfield developed in a coherent and sensitive manner, to nurture what we have, meet the needs and aspirations of our diverse community, and enhance the green environment that plays such an important role in defining our town's character'.
Core recommendations relating to green spaces and green infrastructure included:	'Advocating more sensitive residential development at a scale that respects our built and green heritage and social mix'. 'Advocating the preservation of our green boundaries as key to the town's character where those boundaries preserve our identity as a distinct town and protect us from urban sprawl'.

Core Objectives:	<p>Objective E2 - To enrich the main routes into town for the benefit of people and wildlife</p> <p>That community and Council work together to:</p> <ul style="list-style-type: none"> • Plant wild flowers or bulbs along our main ‘Green Fingers’ where appropriate • Undertake a tree planting scheme across town with a commitment to plant 100 trees in 5 years • To enhance visual impact and create biodiversity • Place park benches along the routes for the benefit of walkers • That proper accessibility for push and wheelchairs is ensured along all main routes, on at least one side of the road, renovating paths around large trees where necessary • That the Wilton Park development is linked to the New Town via a green foot/cycle path <p>Objective E3 - To further develop our green spaces for the benefit of townspeople, visitors and wildlife and protecting our green boundaries</p> <ul style="list-style-type: none"> • That the Town Council continues to support its significant natural habitat open spaces, maintaining them for the benefit of wildlife and residents • That the Town Council continues to support the development of our open spaces to provide added opportunities for the young to socialise, play and enjoy nature • That potential locations for a new playground for the New Town are identified and a project group set up to pursue feasibility and possible funding • That a task force is set up to investigate the feasibility of planting a community orchard in the town, ideally located near our main cluster of schools. • That every effort is made to protect greenbelt land and other green spaces around the town • That Beaconsfield’s trees are further safeguarded by reviewing individual and area TPOs and landscape succession. The special importance of ancient woodlands (Walkwood, Ledborough Wood and Browns Wood) should be noted.
-------------------------	--

b. Public Consultation for this Beaconsfield Neighbourhood Plan (late 2021/early 2022)

956 respondents completed a public questionnaire. Key feedback is set out below:

Public Consultation for the Beaconsfield Neighbourhood Plan (2022)	
Key themes	<p>Key changes residents would like to see include:</p> <ul style="list-style-type: none"> - Housing, green spaces, traffic, and community areas - Residents would like Beaconsfield to remain as it is especially around housing development and green spaces <p>Strong support at 97% that the Green Belt is very important to the town and that it should and must remain in place.</p> <p>Enhanced green spaces in the settlement area including the high street scene. 82% in support of more high street trees.</p> <p>77% agreeing with more public green space within the town</p>
What would you like Beaconsfield Town Council to focus on?	<p>‘More high quality maintenance of our green spaces’</p> <p>‘Improve, increase, and maintain Green Spaces’.</p> <p>‘More green spaces, more community spaces e.g. Playgrounds for children. More green spaces that families can use’. 75% in support</p> <p>‘Protect the Green Belt and provide community areas. 94% in support.</p> <p>‘To preserve our historic and character areas and strengthen that protection’. 97% in support.</p>
Public comments:	<p>“We need more public gardens, parks and other green species in the town”</p> <p>“Green spaces should be redesigned and managed properly”</p> <p>“I would like our Greenbelt to remain protected including paths and parks”</p>

<p>Question: 2e. What would you most like Beaconsfield Town Council to focus on or prioritise in the next few years? (Open Answer)</p>	<p>906 (95%) out of a total of 956 respondents completed this question. Top repeating keywords include:</p> <ul style="list-style-type: none"> • “Town” was mentioned 224 times • “Green” was mentioned 221 times • “Roads” is mentioned 220 times • “Traffic” was mentioned 163 times • “Parking” was mentioned 150 times
<p>Question: 6a. How important is the green countryside surrounding the town to you? This includes the various woods and open views and meadows. (Open answer)</p>	<p>927 (97%) out of a total of 956 respondents completed this question. Top repeating keywords include:</p> <ul style="list-style-type: none"> • “Very” mentioned 578 times • “Important” mentioned 519 times • “Extremely” mentioned 97 times • “Green” mentioned 73 times • “Vital” mentioned 50 times
<p>Question: 6e. How often do you use each of the following parks and green spaces across Beaconsfield?</p>	<p>891 (93%) out of a total of 956 respondents completed this question. In terms of total visitations the top 10 most visited parks and green spaces in rank order were:</p> <ol style="list-style-type: none"> 1. Town Hall Green 2. Walkwood 3. War Memorial Gardens 4. St Michael’s Green 5. Windsor End Green 6. Holtspur Bank Nature Reserve 7. One Tree Meadow 8. Holtspur Bank Butterfly Reserve 9. Malthouse Square 10. The Oval <p>The top five parks and green spaces visited at least once a week in rank order were:</p> <ol style="list-style-type: none"> 1. Walkwood 2. Town Hall Green 3. St Michael’s Green 4. Market Square Garden 5. Windsor End Green

c. Summary of Public Feedback

- Protection of the Green Belt. 97% in support that it is very important to the town and that it should and must remain in place.
- The preservation of the green boundaries around the town are key to the town’s character where those boundaries preserve our identity as a distinct town and protect from urban sprawl. 97% in support.
- To preserve the historic and character areas of the town and strengthen that protection. 97% in support.
- Enhanced green spaces in the settlement area including the high street scene. 82% in support of more high street trees.
- The greenness of the town and its surrounds are important.
- More public green space within the town. 77% in support.
- Improved access to sport and leisure facilities on the open green spaces.
- The provision of open spaces suitable for older children across the town including a skatepark or scooter park.
- Higher quality maintenance of our green spaces.
- Green spaces would benefit from improvements in design, care and maintenance.

St Michael’s Green, New Town

7. FUTURE STATE - HOW PLANNING CAN HELP ACHIEVE THESE GOALS IN BEACONSFIELD

a. Balancing people and nature – Enhance our green open spaces to ensure the town is attractive as a place to live, work and play for everyone

Beaconsfield’s population in mid 2016 was 12,675. There has been considerable population growth of c. 20% over the period 2001 to 2016. This is significantly more than the 12% growth in the South East and in England over the same period. (Source: Mid-Year Estimates (ONS) 2016 and Local Government Insight Report August 2018).

In terms of population profile, the mid 2016 figures showed that 22.1% of the population of Beaconsfield was between the ages of 0-15 years, 57% were between the ages of 16-64 years, and 20.9% greater than 65 years.

Beaconsfield Population Profile (Mid 2016)		
Age of Population	% of Total Population	No. of Population
Working (16-64)	57.0%	7,220
Non-working (0-15)	22.1%	2,805
Non-working (65+)	20.9%	2,650
Total	100%	12,675
<i>Source: Mid-Year Estimates (ONS) 2016</i>		

It is well documented that the amount of time children spend playing outdoors, their ability to get around independently, and their level of contact with nature are strong indicators of how a town is performing. From the latest statistics, 22.1% of the Beaconsfield population are aged 0-15 years. The needs of these young people and their families in terms of access to green open spaces is important to fully assess. There is risk that they could choose to live in other towns or destinations which have a better offering, resulting in detrimental economic and cultural impacts on the town.

Post the Covid pandemic more people are working from home and for Beaconsfield this means more people using the town’s resources during the day. Analysis of the findings of the public consultation questionnaire highlighted that 11% of respondents worked in Beaconsfield and close to 24% of respondents worked from home all the time and 38% some of the time. This trend is expected to continue, and therefore access to local green spaces for the town’s working population will continue to be important.

With a diverse population, a multi-generational approach to planning green spaces in and around the town is key so that it works for everyone to create a healthier, more inclusive, vibrant, and resilient environment for all to live, work and play.

In summary, the protection, use, accessibility, and connectivity to these open spaces and the network of green infrastructure across Beaconsfield is crucial to maintaining a thriving town and is afforded the highest degree of attention.

Town Hall Green

b. Creating effective spaces - Achieve well designed quality green open spaces in the town centre to maintain vibrancy and social cohesion

Accessibility to well maintained, well designed public gardens and open spaces as a place to meet, rest and relax are crucial. This was highlighted in public consultation feedback.

Within the town centre, how green spaces are designed within the context of their surroundings and street scene is key to their overall effectiveness. This is particularly important for the Town Hall Green, St Michael's Green, the War Memorial Gardens, and Market Square Garden. The Town Hall Green should be put centre stage and enhanced as a key community focus for the town.

Initiatives which have been widely adopted in towns to improve the accessibility, use and visual attractiveness of these central spaces includes the design of quality landscaping, tree planting and bulb planting, careful street furniture placement, children's play areas and other complimentary uses such as water fountains. The latter recently installed on the Town Hall Green by the Town Council.

Central open green spaces used as a multi-functional place to meet for public events adds to vibrancy such as the market in the Old Town. More of these types of events should be encouraged.

Beaconsfield Old Town Tuesday Market

c. Improving health and wellbeing – Enhance our open spaces to promote healthy lifestyles and safe communities in the town

The town's green open spaces including green belt land, playgrounds, sports fields and parks are invaluable community assets for the general health and wellbeing of residents. This is particularly important as:

- In 2015, data from the Department for Work and Pensions (2015) stated that 7.4% of children in Beaconsfield were classified as being in poverty. It is well researched that access to open spaces reduces health inequalities particularly in areas of social deprivation.
- In the last Census 2011 20.2% of the population of Beaconsfield lived in flats with little or no access to a garden.

One Tree Meadow

Recreational Open Spaces/ Playgrounds

Malthouse Square Recreation Ground and Holtspur Recreation Ground are important community assets in terms of access and use. The recent refurbishment of the Malthouse Square Playground has further helped local families to enjoy time outside, for exercise and for social interaction. There is currently a lack of a suitable playground in the New Town or recreational resources for older children (aged 5-15 years).

Sports/ Playing Fields

There are a number of sports play fields/ grounds with associated support facilities which are valuable community sports assets. All except the tennis facilities lie in Green Belt:

Football – pitches laid out at Wooburn Green Lane, and at Wilton Park. Both have changing room facilities.

Rugby - rugby pitches and a clubhouse laid out at Oak Lodge Meadow.

Cricket - Beaconsfield Cricket Club comprises 3 cricket pitches, a clubhouse and pavilion off the London Road. The club supports an annual community fire display.

Tennis – based off Grenfell Road in the New Town, Beaconsfield Tennis Club has tennis courts, boules, green space, and mature tree area.

Woodlands

Close proximity to woodland areas to ensure access to nature is important in the town. Walkwood, which is close to the centre of town, is particularly important as are areas of established and ancient woodlands which surround the town, both public and privately owned. Access to outer lying woodlands areas and green spaces for walking and cycling is encouraged and would benefit from better information and signage.

Allotments

Allotments are important to encourage food sustainability. The Ivins Road Allotments are now the only allotments available in the town and should be preserved and enhanced.

Communication

Improved site maps, information boards, waymarking to highlight links to and from a site, interpretation boards and nature boards would all add to inform, encourage, and increase footfall to these green spaces around the town to help enhance wellbeing.

d. Improving biodiversity - Mitigate climate change and enhance the natural environment in the town for the benefit of people and nature

Mitigating the impact of climate change and rising temperatures is essential for the long term sustainability of the town. More generalised flooding has been experienced on the

town's high streets and residential roads in recent years as the regularity of heavy rain showers becomes a more common occurrence.

Increasing infill development is also encroaching on natural habitats and removal of established trees and hedgerows for development and formation of driveways are a continuing threat with localised flooding, loss of shaded areas and loss of biodiversity.

Biodiversity is essential to plants, animals, and ecosystems. Future landscape and ecological enhancements should be designed to improve and balance the benefit for wildlife and humans. There is considerable scope for this in Beaconsfield.

Initiatives that would help to mitigate climate change and enhance the natural environment in the town include:

- **Maintaining and planting new trees and hedgerows on residential streets and high streets**

Planting of new trees and hedgerows should be encouraged on residential/high streets where it is appropriate and in keeping with the street scene on the boundary of private land and also on the highway. They have significant positive impacts including improving the overall attractiveness of an area, reduce waterlogging and localised flooding, provide shading, provide a habitat for a wide range of wildlife, and improve air quality.

The planting of 27 flowering cherry and rowan trees on the verges on Sandelswood End in the New Town in early 2021 (and a further 10 in 2022) has considerably reduced localised flooding in the road and improved the overall attractiveness of the area. The initiative was driven by a desire to ensure the road was safer for pedestrians and cyclists on a busy section of a residential road close to a primary school. The trees act as a natural barrier, and slows traffic allowing cars, cyclists, and pedestrians to co-exist more easily. They also provide valuable shade and helps with local air quality.

There is a need to reinstate and strengthen green infrastructure in the three hearts of the town, and well planned tree planting in key areas can often make immediate but longstanding positive impacts to the 'look and feel' of the street scene, which is of particular importance in certain areas of special character and conservation areas.

- **Planting bulbs and wild flowers on smaller green areas and verges**

Planting early daffodils, wild bluebells and primrose, and other wild flowers on smaller open green areas and verges not suitable for trees close to the street would be a positive contribution to biodiversity. Introducing ferns, mosses and other shaded species into damp shaded areas should also be considered.

Town Hall Green bulb planting

- **Maintaining, planting, and improving tree and hedgerow habitats**

Trees and hedgerows throughout the town and in particular along the green infrastructure network should be maintained and strengthened. A range of tree types and sizes should be considered particularly along the green infrastructure network including the green belt where these are currently located and are in keeping with their setting. Native species such as oak and beech are particularly important for the local landscape and wildlife, but smaller more ornamental ones may be more appropriate in some settings. Native plant species tend to support a wider range of birds and fit better in a predominantly wild setting.

In built up areas some cultivated species can provide good visual impact and add interest to the area. The introduction of nuisance species is discouraged.

Vertical opportunities for planting using species which naturally attach themselves to trees or walls or which require some form of support should be encouraged. These are particularly useful where there is limited ground space. For example, where front gardens have been made into parking spaces or in areas around the town centre.

Existing hedges should be maintained and enhanced, and new hedges planted as they have a positive impact on biodiversity, bird habitats and act as a barrier for dust and wind. These should not encroach on footpaths or driveways.

Small residential or commercial development sites (less than 2 hectares) should clearly set out in their planning proposals well-defined landscaping designs and layouts which match the environment, use and setting adding to rich biodiversity. Larger developments (greater than 2 hectares) should incorporate larger scale planting including woodland and meadow areas, where it is considered appropriate having regard to the quality of soil and the setting.

- **Rewilding**

Planting woodland flowers and wild flowers should be considered. Ideally these should be in places where grass cutting times can be controlled.

- **Protecting Bat and Hedgehog Populations**

All new buildings bordering or within close proximity to open spaces and the green infrastructure network should incorporate integrated bat boxes and hedgehog holes to support bat and hedgehog populations.

- **Planting green roofs and green walls**

These should be further encouraged in existing and new developments to absorb carbon and improve air quality wherever possible.

There are additional policies set out in the Neighbourhood Plan to help mitigate climate change such as promoting sustainable design as set out in the Design Code, and a network of footpaths, cycle paths, and bus services in and around the town with links to the protected Green Belt land and areas of AONB surrounding the town i.e. 'the lungs of the town'. All of these elements are crucial to improving access to green spaces, and the ongoing health of the town.

8. DESIGNATION OF LOCAL GREEN SPACES

Paragraph 101 of the National Planning Policy Framework (NPPF) guidelines highlights that the designation of land as a Local Green Space through Local and Neighbourhood Plans allows communities to identify and protect green areas of particular importance to them. Further guidelines state that designating land as Local Green Space should be consistent with the local planning of sustainable development, and complement investment in sufficient homes, jobs, and other essential services. These Local Green Spaces should also only be designated if they are capable of enduring beyond the end of the plan period. In determining those spaces in the town which are suitable for inclusion on a Local Green Spaces list, consideration has been given to Paragraph 102 of the National Planning Policy Framework (NPPF) Guidelines which states:

“The Local Green Space designation should only be used where the green space is:

(a) in reasonably close proximity to the community it serves.

(b) demonstrably special to a local community and holds a particular local significance, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife; and,

(c) local in character and is not an extensive tract of land”.

Candlemas Pond

The above criteria (a), (b) and (c) were considered when engaging with the local community. Each of the spaces identified met criteria (a) and (c). For criteria (b) it was important to establish the reasons why certain spaces were special to the local community and locally significant. Visitation numbers were also analysed. The following criteria were deemed important:

Accessibility	This relates to the visual attractiveness and aesthetic value of the space, and its contribution to the streetscape, landscape, character or setting of the town. It also relates to how it contributes to local character, by defining a sense of place, or by helping to define the physical form of the town.
Historical Significance	This relates to the historic importance the space holds for the town. This could be because it contributes to the setting of a heritage asset or some other locally valued landmark. It may also hold cultural associations which are of particular significance.
Recreational Value	This is the local significance for recreation and importance to the town for a particular recreation activity or range of activities. These could be formal or informal activities.
Tranquillity	This is how well the space serves as a quiet place to sit and relax, offering a place for reflection and peaceful enjoyment.
Biodiversity/ Wildlife	The space is locally significant for wildlife in a way that could be demonstrated such as a home to species or habitats of principal importance, ancient woodland, or locally characteristic plants and animals.
Air Quality	The quality of air for general health and wellbeing is important for a space’s overall attractiveness as place to relax or for exercise.

For the analysis each space was given a score between 1 and 5 as to how well it met each of the criteria. 1 being low and 5 high. The results were collated and set out in tabular and graphical format, set out more fully in Appendix B.

Based on this analysis, the following spaces are proposed for listing with the highest level of protection as Local Green Spaces:

1. **St Michael's Green – green space**
2. **The Oval – green space, sports (tennis)**
3. **Walk Wood – ancient woodland, meadow, green space**
4. **Market Square Garden – green space**
5. **Malthouse Recreation Ground – green space, playground, fitness zone, football nets**
6. **Holtspur Recreation Ground – green space, playground, fitness zone**

The following sites already have existing protections and are categorised as 'Valued Green Spaces with Existing Protections':

1. Town Hall Green (Common Land)
2. One Tree Meadow (Village Green Status)
3. Wheeler's Green (Village Green Status)
4. Candlemas Pond (Common Land)
5. Davenies Strip (Common Land)
6. War Memorial and Windsor End Green (Common Land)
7. Oak Lodge Meadow - rugby pitches (Green Belt)
8. Hampden Hill (Conservation Area/ Village Green Status)
9. Holtspur Bank Nature Reserve (Locally Listed Nature Reserve/Green Belt)
10. Ivins Road Allotments (Green Belt)
11. Wooburn Green Lane Sports Field - football pitches (Green Belt)
12. Beaconsfield Cricket Club (Green Belt)
13. Wilton Park Parkland and Pond and Wilton Park Football Pitches (Green Belt)
14. Minerva Way, Wilton Park, and Bowl Barrow Way – woodland and green habitats (Green Belt)
15. The whole of the Green Belt area within the Parish of Beaconsfield

Market Square Garden

Green Belt on A355

9. KEY POLICY PRINCIPLES AND OBJECTIVES

We recognise continuing tensions exist locally between preserving the town's character and identity, its green boundaries and its current open spaces and green infrastructure, and the ongoing infill development and demands on land for development. This theme is further emphasised in the recently published document by the Government Policy Exchange "Nature and the City" - December 2021. This advocated a number of policy principles for enhancing access to nature in an urban setting:

1. "Enhance the services nature provides society – there is strong evidence of the benefits of urban greenery, and their value will increase as climate change and urbanisation progresses. Policies therefore to put nature at the centre of future densification.
2. Deliver outcomes that are desirable for both people and nature – meet the needs of people while leaving the environment in a better state.
3. Give communities more autonomy and room for experimentation – 'Good quality' nature needs space over the medium to long term to establish itself. This requires community buy in at the local level".

Our recommendations are led by **three guiding policy principles**:

1. To designate high community value Local Green Spaces to protect them for generations to come.
2. To create, enhance, and maintain a green infrastructure network of local open green spaces and green corridors for the purpose of promoting ecological connectivity, outdoor recreation, and sustainable movement through the parish and into neighbouring parishes, helping mitigate climate change, and ensuring the town continues to thrive.
3. To ensure that all development proposals that lie within or adjoining the green infrastructure network are required to have full regard to creating, maintaining, and enhancing the network through quality design, landscaping including trees and bulbs, recreational provision, open green spaces and delivering a net gain in biodiversity value.

These guiding principles are recommended to be met through the following objectives.

Objective 1 – Protecting Community Green Spaces - Designated Local Green Spaces are given the highest level of protection for future generations to enjoy

1. St Michael's Green – green space
2. The Oval – green space, sports (tennis)
3. Walk Wood – ancient woodland, meadow, green space
4. Market Square Garden – green space
5. Malthouse Recreation Ground – green space, playground, fitness zone, football nets
6. Holtspur Recreation Ground – green space, playground, fitness zone.

Objective 2 – Balancing People and Nature - Enhance our green open spaces to ensure the town is attractive as a place to live, work and play for everyone

- Every effort is taken to protect green spaces and green infrastructure including those which lie in the Green Belt, Conservations Areas, Areas of Outstanding Natural Beauty (AONB) and Common Land.
- Ensure the managed integration and connectivity of the open spaces and green infrastructure into and in the town including usage and access to the various sports and green spaces, and to preserve and enhance their biodiversity.

Objective 3 – Creating Effective Spaces - Achieve well designed quality green open spaces in the town centre to maintain vibrancy and social cohesion

- Encourage and support tree planting and bulb planting in the centre of the town where it is compatible with the street scene to break up the urban environment and to improve visual appearance, safety, and air quality.
- Review greening options, including landscape design, of key open spaces in the town centre and any new development to improve use, access, safety, and their visual attractiveness.
- Encourage and support the use of open spaces for multiple users and events.

Objective 4 – Improving Health and Wellbeing - Enhance our open spaces to promote healthy lifestyles and safe communities in the town

- Avoid the loss of recreational functions and sports grounds unless there is an opportunity for wider integration and co-location of sports facilities and services.
- Enable the feasibility, planning and delivery of a playground in the new town for young children.
- Enable the feasibility, planning and delivery of recreational facilities for older children
- Ensure that open spaces do not suffer from encroachment from car parking and traffic particularly in higher density residential areas to safeguard access.
- Enhance the allotment at Ivins Road for the benefit of community cohesion and food sustainability.
- Review further opportunities to create linkages between the key open spaces and address gaps in existing networks in footpaths and cycle routes.
- Enhance accessibility to green local spaces by waymarking key green open spaces and links between them.

Objective 5 – Improving Biodiversity - Mitigate climate change and enhance the natural environment in the town for the benefit of people and nature

- Protect, maintain, and enhance the planting of trees and hedgerows along existing green corridors to add to biodiversity.
- Promote the planting of trees and bulbs on street verges where appropriate with the street scene to enhance visual attractiveness, and biodiversity.
- Existing trees are safeguarded by reviewing TPOs (Tree Preservation Orders) to enable enforcement.
- Ensure that development sites (less than 2 hectares) are required to clearly set out in their planning proposals well-defined landscaping designs and layouts which match the environment, use and setting adding to rich biodiversity. Larger developments (greater than 2 hectares) should incorporate larger scale planting including woodland and meadow areas, where it is considered appropriate having regard to the quality of soil and the setting.
- Secure a natural corridor through any existing or new development that enables wildlife to travel in and through or to link to surrounding paths.

- Integrate bat boxes and hedgehog holes in new buildings bordering or within close proximity to open spaces and the green infrastructure network.

War Memorial Gardens

Holtspur Recreation Ground

APPENDIX A: GREEN INFRASTRUCTURE (POLICY BEACON5) & LOCAL GREEN SPACES (POLICY BEACON6)

A study was undertaken during 2022/23 of all the publicly accessible open spaces in the town to inform this policy, which included audits of each site and analysis of public feedback. A clear and consistent methodology was used to assess the sites. A qualitative analysis tool was used to identify candidates for Local Green Space designation as part of this policy.

A total of 32 green spaces were identified throughout the town. Many of these spaces have existing designations such as Village Green status, Common land, and/or are located within the Green Belt.

Account was taken of other specific designations affecting the spaces including the natural environment, and historic areas. Ancient woodlands and veteran trees are afforded increased protection through the National Planning Policy Framework (NPPF). Sports pitches and playing fields have no formal designation but are addressed in the national policy at Paragraph 99 of the NPPF.

We are advised that land already within the Green Belt does not require designation as it has the same policy status. However, it does not recognise the landscape quality or community value of land. Within the Green Belt a number of green spaces have been identified that need to be maintained and improved as they have strong community and amenity value, and therefore they are also included in this open spaces study, namely Beaconsfield Cricket Club, Wilton Park Parkland and pond, Wilton Park football pitches, Oak lodge Meadow rugby pitches, Wooburn Green Lane football pitches, ancient and key woodland, and priority habitats, Holtspur Bank Nature Reserve, Holtspur Bank Butterfly Reserve and Ivins Road Allotments.

In determining those spaces in the town which are suitable for inclusion on a Local Green Spaces list, consideration has been given to Paragraph 102 of the National Planning Policy Framework (NPPF) Guidelines which states:

“The Local Green Space designation should only be used where the green space is:

(a) in reasonably close proximity to the community it serves.

(b) demonstrably special to a local community and holds a particular local significance, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife; and,

(c) local in character and is not an extensive tract of land”.

The above criteria (a), (b) and (c) were considered when engaging with the local community. Each of the spaces identified met criteria (a) and (c). For criteria (b) it was important to establish the reasons why certain spaces were special to the local community and locally significant. The following criteria were deemed important as set out in the table below.

Market Square Garden

Walk Wood

Accessibility	This relates to the visual attractiveness and aesthetic value of the space, and its contribution to the streetscape, landscape, character or setting of the town. It also relates to how it contributes to local character, by defining a sense of place, or by helping to define the physical form of the town.
Historical Significance	This relates to the historic importance the space holds for the town. This could be because it contributes to the setting of a heritage asset or some other locally valued landmark. It may also hold cultural associations which are of particular significance.
Recreational Value	This is the local significance for recreation and importance to the town for a particular recreation activity or range of activities. These could be formal or informal activities.
Tranquillity	This is how well the space serves as a quiet place to sit and relax, offering a place for reflection and peaceful enjoyment.
Biodiversity/ Wildlife	The space is locally significant for wildlife in a way that could be demonstrated such as a home to species or habitats of principal importance, ancient woodland, or locally characteristic plants and animals.
Air Quality	The quality of air for general health and wellbeing is important for a space's overall attractiveness as place to relax or for exercise.

For the analysis, each space was given a score between 1 and 5 as to how well it met each of the criteria. 1 being low and 5 being high. The results were collated and set out in tabular and graphical format set out more fully in Appendix B of the 'Local Green Spaces and Green Infrastructure Study'. This analysis identified 6 key spaces as potential candidates for Local Green Space designation.

The analysis is summarised in the following schedules with information for each space including type, location, a brief description, size, ownership, any existing protections, if they met criteria (a), (b) and (c) of Paragraph 102 of the NPPF, total qualitative score and if they were a candidate for Local Green Space designation.

BEACONSFIELD NEIGHBOURHOOD PLAN - OPEN SPACES AND GREEN INFRASTRUCTURE STUDY
LIST OF PUBLICLY ACCESSIBLE LOCAL GREEN SPACES AND LOCAL GREEN SPACE DESIGNATION CANDIDATE SITES

Name	Type	Location	Description	Size (acres)	Ownership	Existing Protection	Test (a) Close to community	Test (b) Community Value	Test (c) Local in character and not extensive	Total Score (Max. 30)	Local Green Space Designation
Town Hall Green (1)	Green space	Station Road in front of Town Hall building.	Grassed area and flowerbeds with benches. Area used to sit and relax by local residents and workers.	tbc	Unitary (BTC mangt)	Common Land	√	√	√	21	
St Michael's Green (2)	Green space	Warwick Road	Grassed area with flowerbeds surrounded by church and residential. Area used to sit and relax for local residents and workers, and visitors to Bekonscot. Picnicking, etc.	tbc	Unitary (BTC mangt)	x	√	√	√	24	<p>Accessibility Excellent</p> <p>History Church green</p> <p>Recreation A place to sit and relax by local residents and workers, and visitors to Bekonscot.
